NOTES

Separate VDV, Soviet Naval Infantry and Soviet Forces in Afghanistan lists are also available.

Whilst Soviet main tank guns can often be of similar or larger calibre and type to those used by the US and NATO, training, ranging equipment and tactical doctrine dictates that shooting will take place at much closer ranges than the maximums indicated by their official specifications. This is reflected in the effective ranges in the army list above.
All on-table Artillery can also be bought and deployed off-table.
